Direction (Question Nos. 2-6) : Read the passage carefully and answer the questions that follows:

It was the last night of summer before they all had to go back to school, and Sarah and her friends decided to make it a night to remember. They gathered in Sarah's backyard, where they set up a bonfire and brought out some snacks and drinks. They talked and laughed, reminisced about their summer adventures, and made plans for the upcoming school year.

As the night wore on, Sarah's friend Jack suggested they play a game of Truth or Dare. Sarah hesitated at first, but Jack promised it would be fun. The game started innocently enough, with silly dares like singing a song or doing a cartwheel. But then the questions started getting more personal, and the dares more dangerous.

Sarah was starting to feel uncomfortable, but she didn't want to seem like a buzzkill, so she went along with it. When it was her turn, Jack dared her to climb up on the roof of the house. Sarah hesitated again, but the pressure from her friends made her do it.

She climbed up onto the roof, heart racing, and looked out at the moonlit neighborhood. It was beautiful up there, and for a moment, she forgot about the game and just enjoyed the view. But then, she heard a crack and before she knew it, she was falling.

Sarah woke up in the hospital with a broken arm and a concussion. Her friends had all rushed to her side, but they looked different now. They were no longer carefree teenagers, but scared and guilty-looking. They had all played a part in pressurizing her to do something she didn't want to do, and now she was paying the price.

2. What did Sarah and her friends do to celebrate the last night of summer? (2)
3. What game did Jack suggest they play, and how did it start? (2)
4. Why did Sarah feel uncomfortable during the game of Truth or Dare? (2)
5. What dare did Jack give Sarah, and what happened when she did it? (2)
6. How did Sarah's friends react when she got hurt? (2)

Direction (Question Nos. 7-11) : Read the passage carefully and answer the questions that follows:

Climate change is no longer a distant threat discussed in scientific journals; it is an unfolding reality shaping daily life.

Rising global temperatures have intensified heatwaves, disrupted monsoon patterns, and accelerated glacier melt. For agrarian economies like India, erratic rainfall means crop failures, food inflation, and farmer distress. Coastal cities face the dual burden of sea-level rise and frequent cyclones, forcing difficult choices about infrastructure and migration.

Yet the crisis has also sparked innovation. Solar energy costs have fallen 80% in a decade, making renewables competitive with coal. Electric vehicles, once a niche, are entering mainstream markets. Communities are reviving traditional water harvesting methods, blending ancient wisdom with modern science. The path forward demands both mitigation-building resilience. Neither is possible without public awareness and policy that bridges the gap between global summits and local action

7. List two impacts of rising global temperatures mentioned in the passage. (2)
8. Why are agrarian economies like India especially vulnerable to climate change? (2)
9. What positive developments have emerged in response to the climate crises? (2)
10. How are communities addressing water scarcity according to the passage? (2)
11. What does the author suggest is essential for effective climate action? (2)

Direction (Question Nos. 12-16) : Read the given passage carefully and answer the questions that follows:

Pollution is the fouling of the environment-land, water and air-borne waste, smoke , chemicals and other harmful substances. The most serious pollution occurs where there are large cities and many factories. Every industrial country faces the problem of waste. As factories produce new goods for people to buy, old ones are thrown out with the household rubbish. Burning this refuse pollutes the air, dumping it in rivers and seas pollutes the water, and rubbish tips are unpleasant and take up much needed space. Getting rid of plastics is particularly difficult. Wood and paper decay after sometime through the action of bacteria. But plastics never decay. The more we throw away, the more litter is produced.

All the oxygen in the water is used up. The world's oceans have been used as 'Dustbins', with millions of tonnes of rubbish being dumped into the sea every year, harming marine life. If too much untreated sewage is poured into the seas, lakes and rivers from sewers, the water can no longer dilute it. All the oxygen in the water is used up, and the fishes die. The bacteria which normally break down the sewage into harmless substances also die, only harmful bacteria which do not need air remain, and these causes diseases.

Smoke from factory chimneys and exhaust gases from motor vehicles pollutes the air. Chemicals in the air combine with moisture to make acids which eat away stone and brick, and so damages buildings. Carbon monoxide gas and substances called hydrocarbons given out by the engines of cars, lorries and buses can damage people's health. Ridding our world of pollution is an unimaginably big task.

12. What is meant by environment? (2)
13. What is the problem related with plastic waste? (2)
14. Why do fish die? (2)
15. What agents damage buildings? (2)
16. What is 'dustbin' according to the author? (2)
